

Thank you for buying Big Fish Audio's First Call Horns.

A new version of First Call Horns is now available for free download, adding Intel Macintosh compatibility and a new onscreen interface as well as various fixes and enhancements.

To install First Call Horns and receive the new features, please follow the instructions below.

If you are a new First Call Horns user, or are installing the library on a new computer, you should follow all steps.

If you are updating a computer which has a previous version of the library, you should begin with step 4 and continue to the end.

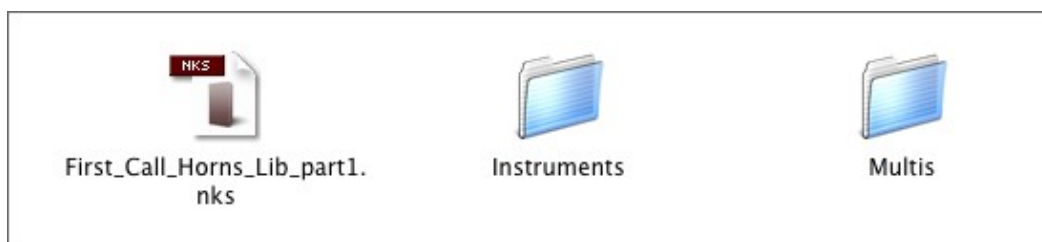

STEP 1: INSTALLING FROM THE DISC

Insert disc 1 into your computer and run the installer. You will be asked for your serial number; use the original serial number on the sticker found in the inside of your First Call Horns DVD box.

The installer will first install the software and then ask you where you would like to put the 1.4GB sample content (the library). You may choose any internal or external hard drive.

STEP 2: COPY THE SAMPLES (NKS FILE) TO YOUR LIBRARY LOCATION

Copy the NKS file from your original DVD into the new First Call Horns library folder. It should sit alongside the multis and instruments folder. Once this is finished, your installation folder should contain an instruments folder, a multis folder, and the NKS file:

STEP 3: REGISTER THE ORIGINAL VERSION OF FIRST CALL HORNS

Run the included Registration Tool (found in the Applications/Big Fish Audio/First Call Horns folder for Mac users, or Program Files/Big Fish Audio/First Call Horns folder for PC users) and follow its instructions to register your copy of the original version of First Call Horns.

STEP 4: DOWNLOAD THE UPDATE AND GET A NEW SERIAL NUMBER

Visit the NI Updates page here:

http://www.native-instruments.com/index.php?id=updates_us

Select BIG FISH AUDIO – First Call Horns and click the Send button.

Download	Info	Date	Filesize
First Call Horns Kontakt Player 2.2.1 Mac OS X Update	What's this ? Update	29 May 2007	76.4 MB
First Call Horns Kontakt Player 2.2.1 Win Update	What's this ? Update	29 May 2007	45.7 MB
Serial number for Big Fish First Call Horns Kontakt Player 2: Click the "What's this"/Info link!	What's this ? Update	29 May 2007	
Bigfish First Call Horns 1.1.8.3 Update	What's this ? Update	21 Jun 2005	11.2 MB
Bigfish First Call Horns 1.1.8.3 Update (already downloaded)	What's this ? Update	21 Jun 2005	8.8 MB

A panel will appear (shown above) with all available updates for First Call Horns. Select the Kontakt Player 2 update for Mac or PC, and it will begin downloading.

(You do not need to download the prior 1.1.8.3 update at all.)

In addition, you will also need to find the “Serial Number for Big Fish First Call Horns KP2 2.2.1” item and click the “What’s This?” button next to it. This will trigger the system to generate a new serial number unique to the new Kontakt Player 2 upgrade. This will be e-mailed to you.

STEP 5: RUN THE UPDATE INSTALLER

Run the newly downloaded update installer. It will ask you for the new serial number (the one you requested in Step 4). The installer will write updated files to the same location as your original installation (step 1).

The installer will also ask if you want to start the NI Service Center installation. You should click yes; you will soon need to authorize the new version of the library, separate from the old one.

STEP 6: AUTHORIZE THE UPGRADED VERSION OF THE LIBRARY

Launch the NI Service Center (located in your Applications folder if you are a Mac user, or the Program Files folder if you are a PC user) and follow its instructions to properly authorize the new version of First Call Horns.

SPECIAL NOTE

Note that the upgrade process does not remove the earlier installation of First Call Horns. This means that you may see the First Call Horns plug-in in your host. This is the previous version. In order to use the newest version, locate the Kontakt Player 2 plug-in, and the new First Call Horns library will be accessible from within it.

If you wish to completely remove the old version, it is safe to do so and can be done by manually removing the following files:

Mac users:

/Library/Audio/Plug-ins/Components/FirstCallHorns.component

/Library/Audio/Plug-ins/VST/FirstCallHorns.vst

/Library/Application Support/Digidesign/Plug-Ins/FirstCallHornsRTAS

/Applications/Big Fish Audio/First Call Horns*

**note that you can delete this entire folder, as long as your library is not stored in it. If your library is stored in it, you should first move the library elsewhere.*

PC users:

C:\Program Files\Common Files\Digidesign\DAE\Plug-Ins\FirstCallHornsRTAS.dpm

C:\Program Files\VSTPlugins\First Call Horns VST plug-in (location may depend on VST hosts)

C:\Program Files\DXiPlugins\First Call Horns DXi plug-in (location may depend on DXi hosts)

C:\Program Files\Big Fish Audio\First Call Horns*

**note that you can delete this entire folder, as long as your library is not stored in it. If your library is stored in it, you should first move the library elsewhere.*

We hope you enjoy using First Call Horns!
